Unless otherwise indicated by a superscripted note, "female" and "male" refers to percentage rates for the corresponding indicator; "value" refers to the female-over-male ratio. Percentage rates have been rounded for reporting purposes. Exact values have been used for calculating ratios and scores. The following exceptions apply: † Data on a 0-to-1 scale (0 = worst score, 1 = best score) * Data on a normalized 0.111- to 1.000-scale (0.111 = most diverse, 1.000 = most concentrated) # Age-standardized death rates per 100,000 population † Bracketed numbers show the range between the uncertainties, estimated to contain the true maternal mortality ratio with a 95% probability
